DO WE NEED TO CONSIDER THE POSSIBILITY OF AN EARLY SEASON HIGH ELEVATION WET SNOWFALL FOR NORTH-CENTRAL AND NORTHERN MASSACHUSETTS ON INTO SOUTHEASTERN VERMONT AND SOUTHERN NEW HAMPSHIRE?

DEVELOPING STORM TUESDAY NIGHT AND A POCKET OF VERY COLD AIR ALOFT MAY BE ALIGNED JUST RIGHT ACROSS THESE AREAS TO INITIATE AN EARLY SNOW EVENT...

THIS MAY BE A BIT OF A LONG SHOT, BUT IT IS WORTH A BRIEF UPDATE DUE TO THE TIME OF THE YEAR...

DISCUSSION: In this morning's update I outlined my concern for some high terrain snows Tuesday night into Wednesday anywhere from northeastern NY on across the high country of VT/NH/ME. Well nothing has changed in that regard.

But I am more impressed with the possibility of an early season high elevation snow event for portions of north-central and northern Massachusetts on into parts of southeastern Vermont and southern New Hampshire late Tuesday night as a developing storm intensifies as a pocket of cold air crosses over this area.

There is no reason to hype this potential at the moment since it would only take a minor shift to allow for no snow at all to occur, and the occurrence of snow is highly contingent all several features lining up perfectly. That being said, there is a shot at accumulating wet snow very late Tuesday night and early Wednesday anywhere from the Worcester Hills northward into southeastern VT, and southern New Hampshire.

I will check this out again Tuesday and issue an update if necessary.
