

Receive the latest fuel news fast! Get New England Fuel Institute info via RSS feed.

New England Fuel Institute (NEFI) has established a public access RSS feed that you can link to via your web browser bookmarks (favorites) or receive automatically.

http://www.nefi.com/RSS/New_England_Fuel_Institute.xml

If you click on this link now, you will see that an RSS feed takes all of the timely bulletins, legislative and regulatory updates and other breaking industry news, and assembles them by headlines and starting descriptor. This enables you to link directly and instantly to the item(s) of interest without actually having to log to www.nefi.com.

To receive RSS on your computer:

Your web browser (Explorer, Safari (for MAC), Firefox, et. al.) should allow you to “subscribe” to the RSS feed when you open it. A common way to subscribe is to create a live “bookmark” or “favorite” that will bring you to the RSS every time you select the bookmark. We suggest you obtain the newest version of browser if you have not upgraded recently, and highly recommend Firefox. Web browsers are all available as free downloads on the Internet.

You can also get RSS feeds automatically in different ways, including delivery to you.

Via a Web browser. Sage is an RSS add-on to Firefox, while Pluck adds on to Internet Explorer. Bloglines, NewsGator Online, Pluck Web Edition and My Yahoo are online services you subscribe to that let you view your RSS feeds in any Web browser.

Via your e-mail. NewsGator Email Edition plugs into Outlook Express, Eudora, Entourage, Apple Mail, or other POP3 e-mail clients and lets you receive RSS feeds right in your e-mail window. The same company’s Outlook Edition integrates RSS with Microsoft Outlook. And Mozilla’s Thunderbird e-mail client comes with RSS-reading capabilities built in.

Via a standalone desktop aggregator. Readers such as Google Desktop, Feed-Demon, SharpReader, RssReader, and NetNewsWire (for Mac OS X) are programs you download to your computer and run independently of other software.

Via your mobile device. Through services such as FeedBeep, NewsGator Mobile Edition, Yahoo Mobile, or Elfinlan.

Many of these RSS readers — including the Web-based services listed above — are free; others charge a one-time or monthly fee.
