**A complete course in the design of HVAC systems with an emphasis on oilfired equipment.
 Gain the knowledge and professional skills to design today's state-of-the-art
 heating and air conditioning systems.**

The course will review how to gather the data required to perform computerized heat-loss and heat-gain calculations to determine the actual residential HVAC loads and the necessary equipment requirements. Equipment selection and sizing for new hydronic and warm air heating systems is examined along with replacement guidelines for older systems including steam. The course also covers compliance with State Building and Mechanical Codes. Special section on how chimneys and codes affect replacement installations. Pipe sizing, duct sizing and specialty equipment sizing will also be examined as well as how to properly match distribution systems to heat exchangers and achieve the highest profit using the smallest equipment. The sizing of domestic hot water producers using both conventional and high-tech equipment and techniques for proper and adequate supply will also be discussed along with some basic post installation troubleshooting. The sizing of equipment and distribution units using printed tables and computers will be examined. Students who have laptops and loaded programs are encouraged to bring them.

**Instructor:
 George Lanthier**

**This class is NORA
 Certified for 16 CEU's**
