Training on the current conventional residential hot water heating systems being installed & serviced today.

This is a unique seminar based on the text *Hydronic Systems, (Design, Piping & Wiring)* by the class instructor, George Lanthier. The seminar is for those just beginning to work on residential hot water heating systems and act as a refresher for seasoned veterans. Ideal for service technicians, installers and sales personnel.

The seminar covers the correct design of hydronic piping systems, boiler and system operation and the controls and wiring of gravity, forced, and multi-zone systems. The book is included (a \$26.00 value) and offers the service technician, installer and salesman a reference manual that keeps the engineering required in simple, easy to understand language. All required training and service materials are provided.

This class is NORA certified for 8 CEU's
